

Monterey Bay Community Power (MBCP) is your new, locally-controlled, electric-generation service provider, generating carbon-free electricity for all residential customers in Monterey, Santa Cruz, and San Benito Counties starting in July 2018. As a not-for-profit public agency, MBCP reinvests surplus revenues in the Tri-County region.

What does MBCP mean for Net Energy Metering (NEM) customers? Monterey Bay Community Power will automatically enroll solar customers into our complementary NEM program. MBCP will match PG&E's rates and time of use hours and customers will receive a 3% rebate on any generation charges. Your NEM 1.0 or 2.0 status will remain unchanged, and you will receive the same value for the energy you send back to the grid.

When will I be enrolled in MBCP's NEM program? MBCP has created four special NEM enrollment periods to minimize any potential disruption or loss of value in dollar credits from NEM.

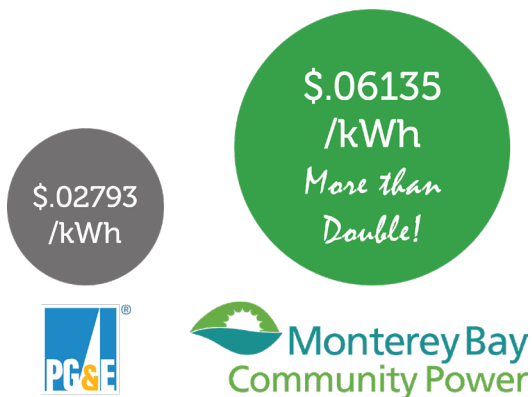

Four Custom Enrollment Periods for NEM Customers:

How will my true-up be affected by MBCP? Your new true-up date moving forward will be your enrollment date with MBCP. Your true-up will continue unchanged whether you're on an annual basis or monthly.

How does MBCP affect Net Surplus Compensation Rates? As of Feb. 2018, PG&E customers were paid a wholesale rate of just \$.02793 for each kWh of surplus energy. MBCP is more than doubling the NSC payout rate to \$.06135. PG&E changes their NSC rate monthly. MBCP is adding more consistency to the NSC rate equation by committing to an annual NSC rate.

Net Surplus Compensation Rates:

A note on NSC: Most NEM customers are not net-generators of electricity and still draw more power from the grid than they produce. These customers will receive the same lower total cost for power that all MBCP customers receive. MBCP will return a percentage of all generation charges back to customers as a rebate.

The rebate value has been set at 3% for 2018, and NEM customers will receive this rebate as a bill credit during NEM customer's annual true-up.
